## guangzhou international lighting exhibition

### GILE expands to record-breaking scale of 260,000 square metres

**Guangzhou, 2 April 2024. The 29th Guangzhou International Lighting Exhibition (GILE), themed “Light – The Power of Infinity”, will be held from 9 – 12 June 2024, at the China Import and Export Fair Complex in Guangzhou, in exhibition areas A and B. As a platform for connecting leading industry players, the fair is expecting to attract over 200,000 lighting professionals across 26 halls covering a total of 260,000 sqm, making it the biggest edition of GILE so far.**

Under the driving force of intelligence, health and low-carbon technologies, the lighting industry is undergoing a period of restructuring, presenting various challenges as well as new opportunities. Regarding the industry’s development, Ms Lucia Wong, General Manager of Messe Frankfurt (HK) Ltd, stated: “The future is promising, with digital transformation, ESG, industry standards and design-driven innovation being priorities. Moving forward, lighting products will become more specialised, with whole-house smart lighting, segmented markets, and customised solutions offering promising opportunities. Industry players need to become user-oriented, and re-examine the basics of lighting technology to create unique market value. Embracing cross-industry collaboration as well as innovation in AI, biotechnology, spatial design, and green living will unlock new markets beyond the traditional lighting industry. These new developments present exciting opportunities which lighting professionals ought to capitalise on.”

The lighting and LED industry is undergoing a technological transformation. Companies involved in IoT, e-commerce, smart home, telecommunications and integrated home solutions are now becoming part of the smart lighting ecosystem, leading to the expansion of the market. Advancements in technology are driving lighting experts to explore different market segments. In the future, the full-spectrum and human-centric lighting sources will together create more applications. Furthermore, solar lighting is also growing rapidly, and the improved efficiency and stability of photovoltaic components alongside LED technology are making lighting systems more energy-efficient.
